Faculty of Computer Science

Structured ML

Course 02360605 – Advanced Topics in Computer Science 5

Introduction

Benny Kimelfeld

Technion – Israel Institute of Technology

Spring 2026

The Course

- Paradigms for ML over **relational databases**
 - To this aim, we learn ML over **tabular** and **graphs**
- Content:
 - 6 core modules
 - Tutorials: rehearsal, SQL, PyTorch, PyTorch Geo, ...
 - In general, the *practical side of the modules*
 - Enrichment module on explainability
 - Invited lecturers
- Staff:
 - Lecturer: **Benny Kimelfeld**
 - TAs: **Boaz Berger, Daniel Elgarici, Ehud Gordon**
 - TA in charge: **Shunit Agmon**

Requirements

- 3 homework **assignments**
 - 10%, 15%, 25% of the grade
 - Each followed by:
 - A “class report” (assuming [in-person](#), attendance required)
 - Or a personal interview (assuming [online](#))
- Final **project**
 - 50% of the grade
 - Oral defense of the project
- In **pairs**
- Final project + all assignments **mandatory**

Assumed Background

- Basic course on **machine learning**
 - Not necessarily *deep learning*
- **Databases** – an advantage
 - Not mandatory, mainly simple concepts used here, can be learned throughout the course

Structured ML

Context: Relational Databases

1970's Debate

C. W.
Bachman
(1924-2017)

*General-purpose DB
to be abstracted as a
network*

Edgar F.
Codd
(1923-2003)

As logic!

Codd's Vision

Edgar F. Codd

- 1970: Codd invents the **relational database** model
 - Idea: interface via **mathematical logic**
 - Data = collection of **relations**, interconnected via keys
 - Questions via a **query language** over the **schema**
 - System translates queries into actual **execution plans**
 - Principle: **separate logical from physical layers**
 - Work done at IBM in San Jose, California
 - [E. F. Codd: *A Relational Model of Data for Large Shared Data Banks*. In Communications of the ACM 13(6): 377-387 (1970)]
 - [E. F. Codd: *Relational Completeness of Data Base Sublanguages*. IBM Research Report RJ987 (1972)]

R	(supplier	part)	S	(part	project)
1	1	1	1	1	1
2	1	1	1	1	2
2	2	2	2	2	1

FIG. 5. Two joinable relations

R*S	(supplier	part	project)
1	1	1	1
1	1	1	2
2	1	1	1
2	1	2	2
2	2	2	1

Information Retrieval

A Relational Model of Data for Large Shared Data Banks

E. F. Codd
IBM Research Laboratory, San Jose, California

employee (man#, name, birthdate, jobhistory, children)
jobhistory (jobdate, title, salaryhistory)
salaryhistory (salarydate, salary)
children (childname, birthyear)

FIG. 3(a). Unnormalized set

employee' (man#, name, birthdate)
jobhistory' (man#, jobdate, title)
salaryhistory' (man#, jobdate, salarydate, salary)
children' (man#, childname, birthyear)

FIG. 3(b). Normalized set

Codd Catches On (1)

- 1973: Michael Stonebraker and Eugene Wong implement Codd's vision in **INGRES**
 - Commercialized in 1983
 - Evolved to **Postgres** (now PostgreSQL) in 1989

M. Stonebraker

INGRES™

E. Wong

Codd Catches On (2)

- 1974: A group from the IBM San Jose lab implements Codd's vision in **System R**, which evolved to **DB2** in 1983

- SQL initially developed at IBM by Donald D. Chamberlin and Raymond F. Boyce

- [Chamberlin, Boyce: SEQUEL: A Structured English Query Language. SIGMOD Workshop, Vol. 1 1974: 249-264]

- 1977: Influenced by Codd, Larry Ellison founded Software Development Labs

- Becomes *Relational Software* in 1979
 - Becomes *Oracle Systems Corp* (1982), named after its **Oracle** database product

R. F. Boyce
(1947-1974)

D. D.
Chamberlin

J. Grey

L. Ellison

P. G. Selinger

DB Popularity in Programming

Structured ML

ML over Relational Databases

Databases: QL vs. ML

- Query languages answer questions that we can translate into **exact** algorithms over the database
 - Designed for simple, high-level, declarative specification of information needs, without dealing with computation
- ML is needed whenever our question involves prediction/uncertainty
 - We cannot phrase an exact query to answer our need
 - ... and yet, we believe that the *database information can greatly reduce the uncertainty*

Example: H&M DB

article	
article_id 🔑	numerical
product_code	numerical
prod_name	text
product_type_no	numerical
product_type_name	categorical
...	...
...	categorical

customer	
customer_id 	text
FN	categorical
Active	categorical
club_member_status	categorical
fashion_news_frequency	categorical
age	numerical
postal_code	categorical

transactions	
t_dat	timestamp
price	numerical
sales_channel_id	categorical
customer_id	numerical
article_id	numerical

Entity Classification Tasks

user-churn

Forecasting

Task Description: Predict the churn for a customer (no transactions) in the next week.

Evaluation metric: AUROC

Entity Regression Tasks

item-sales

Forecasting

Task Description: Predict the total sales for an article (the sum of prices of the associated transactions) in the next week

Evaluation metric: MAE

Example: Arxiv (pub) DB

Entity Regression Tasks

author-publication

Forecasting

Task Description: For each author, predict how many papers they will publish in the next 6 months.

Evaluation metric: MAE

Link Prediction Tasks

co-citation

Task Description: For each paper, predict which other papers will be co-cited with it (i.e., cited in the same reference list) in the next 6 months.

Evaluation metric: MAP

12	DB	3	CS
25	ML	3	CS
34	OS	4	ECS

Common Workflow Nowadays

Graphs, Everywhere

- Social networks
- Communication networks
- Molecules
- Internet pages
- Financial interactions
- Navigation and supply chains
- ...

Graph Learning for Molecular Prediction

Transductive model:

Fixed DB

Inductive model:

Fixed schema & task,
unknown DB

Foundation model:

Nothing known

Structured ML

Course Content

Core Modules in the Course

1. Basic **concepts**
 - Tables, Relations, Graphs, ML, Struct. ML
2. DB ML via **feature generation** & tabular ML
3. Low-dimensional **embedding** of structures
4. Overview of **deep learning**
 - Feedforward, perceptron, attention, transformers, back-propagation, GPU
5. DB ML via graph neural networks (**GNNs**)
6. Relational **foundation models**

Additional Treats (as time permits)

- Module on **explainability** of ML models over structured data
 - TA **Boaz Berger**
- Invited lectures
 - **Avi Mendelson** on foundation models
 - **Haggai Maron** on graph ML

Good Luck!
